

Ranking Credit Scores

A credit score is a complex math equation that evaluates your money information. A banker or lender uses your credit score to determine how financially safe you are. A higher credit score helps you get a loan, a credit card, or some other financial service.

Credit Score	Grades in School
990	A
501	F

Note: The three nationwide consumer-reporting companies tend to use scores between 501–990. The FICO score system uses a range of 300–850.
